

**TM1® Web** allows TM1 users to quickly and easily create real-time, interactive Web-based worksheets — “Websheets” — directly from within Microsoft Excel. The TM1 Web interface enables users across your organization, regardless of location, to view and share reports over the Web or enter data for analytics, planning or forecasting. As a thin client solution, this solution allows any member of your organization to share TM1 data over the Web for collaborative **what-if** planning that involves executives, managers, finance and other departments.

Users across your company can now quickly access and act upon mission critical data within TM1 with a simple interface that requires virtually no learning curve. By utilizing Excel, anyone in your organization can share and interact with TM1 data via a browser.

And TM1 Web is easy to install, with no client-side software. The server component is small and can operate on a single server, minimizing your hardware requirements.

### Key Capabilities To Improve Daily Reporting and Analytics

For companies adding a business intelligence solution or for Applix customers, TM1 with TM1 Web is the smartest choice, providing:

**Dynamic “Websheets”:** Applix TM1’s unique Blshare™ technology empowers end users to create dynamic websheets from Microsoft Excel worksheets.

#### Range of easy-to-use interfaces:

TM1 Web employs the familiar Excel environment, which nearly all business people are familiar with, to publish to the Web. It includes all the functionality of Excel such as formatting and graphing. This means no learning curve — users are up and running in minutes.

#### Real-time *what-if* analyses:

The same instant response times with TM1 are available with TM1 Web. Change a calculation and see the results instantly.

**Step 1: Create a workbook in Excel**

Year	Jan	Feb	Mar	Apr
Actual / Forecast	1000	1000	1100	1200
Budget	1500	1300	1300	1300
Variance	0	-300	-200	100

**Step 2: Output to the Web**

**Step 3: Share it with colleagues!**

With just a few steps in TM1 Web, you can quickly and easily share your reporting and analyses over the Web. And you work in Microsoft Excel as the authoring tool, so you don’t have to learn a new interface.

## Collaborative Planning

For companies using TM1 for planning, budgeting or analytics, TM1 Web allows you to involve more people in the planning process.

- Information is extended to more decision makers supporting multi-site and global collaboration.
- Websheets are visible to all planners and stakeholders.
- All users with read/write capability can perform *what-ifs* using websheets.
- The additional interface is superb for planning and forecasting in a distributed environment in which many of your team work remotely.
- Read-only licenses are available to help you cost-effectively meet the needs of those who do not perform real-time analytics.

## Easy to Implement and Maintain

TM1 Web requires no significant hardware purchase or IT involvement. It's easy to install and provides a zero client footprint solution because it operates on a single server and requires no download for the Web client.

In addition, all administrative functions of the TM1 Web server can be achieved through Microsoft Excel. You can output Excel worksheets to the Web, delete worksheets and workbooks, manage folders and security, all from the familiar Excel interface.

## TM1 Web Features

Using Excel as a Web authoring tool allows your organization to take advantage of Excel's strengths:

- Easy-to-use printing.
- Automatic creation of briefing books.
- The ability to create graphs and charts.
- Financial functions.

TM1 Web also includes features to foster real-time analysis, including:

- Immediate write-back to the TM1 server.
- Automatic updates to reports when TM1 data changes.
- Access to TM1's dimensions as a drop down menu and control of the dimensions to be published.
- The ability to edit subsets.
- Support for worksheets, workbooks and tabs.
- The ability to export data from the web page back into Excel.
- Full compatibility with the Applix Integra platform for workflow capabilities.

## Security

With security down to the cell level, your organization can easily manage its security policies. TM1 Web ensures that sensitive operational and financial data within TM1 remains protected:

- Control which individuals can publish Websheets.
- Easily make Websheets read-only, overriding TM1 security.

## Hardware Platform Support

### Server Operating System:

Windows 2000

### Web Server:

IIS (ASP), JSP

### Client Operating System:

Windows 2000 or Windows XP

## Browser Support

Internet Explorer 5.5 and later.
