

Your Fast Track to Business Intelligence and Performance Management

Designed with business users in mind

Cubeware Analysis System delivers flexible Business Intelligence and Performance Management solutions that are fast to install and simple to use at a price that fits your budget. In no time flat you can analyze data ad hoc, create your first reports, transform budgeting into a collaborative process and automate the distribution of reports throughout your business.

Since Cubeware Analysis System is intuitive to use, you can easily build management cockpits and dashboards in different languages and quickly customize your reports to reflect your corporate design. The powerful underlying technology guarantees scalability so you can later modify or extend the system to meet your changing requirements.

Put Cubeware Analysis System to work for you!

The components of Cubeware Analysis System

Cubeware Cockpit – Integrated Business Intelligence front end

Cubeware Cockpit offers a single solution for all your analytic, planning and reporting needs. You profit from the single user interface, consistent technology and a clear licensing policy.

- Graphical interface for analysis and planning
- Multiple visualization and layout options
- Central administration of all Cockpit reports
- Automated, scheduled report distribution to authorized users across the enterprise
- Identical in Windows and Web environments

Cubeware Importer – Single version of the truth

Cubeware Importer consolidates your corporate data sources into a multidimensional database so that business users can tap your data resources to work more efficiently. This powerful ETL and modeling tool connects to ERP, accounting, point of sales and other source systems from all leading vendors.

- Automated data extraction, consolidation, verification and import from various source systems (e.g. SAP) into the structures of a multidimensional OLAP database.
- Graphical interface with comprehensive mapping and scripting features

OLAP database of choice – Security through flexibility

Since each OLAP database has its advantages, we work with you to evaluate which one best suits your needs. This depends on many different factors including the volume and complexity of your data as well as the need for end-user administration, integrated planning functions or a distributed architecture. And should your requirements ever change, Cubeware's open architecture ensures the highest level of scalability and security.

You can choose from leading multidimensional databases:

- MIS Alea, Applix TM1, Microsoft SQL Server Analysis Services 2000 / 2005, PowerOLAP, Palo
