

proDoc for TM1

The professional Documentation tool for TM1 projects

TM1-projects are growing and very dynamic– documentation is essential

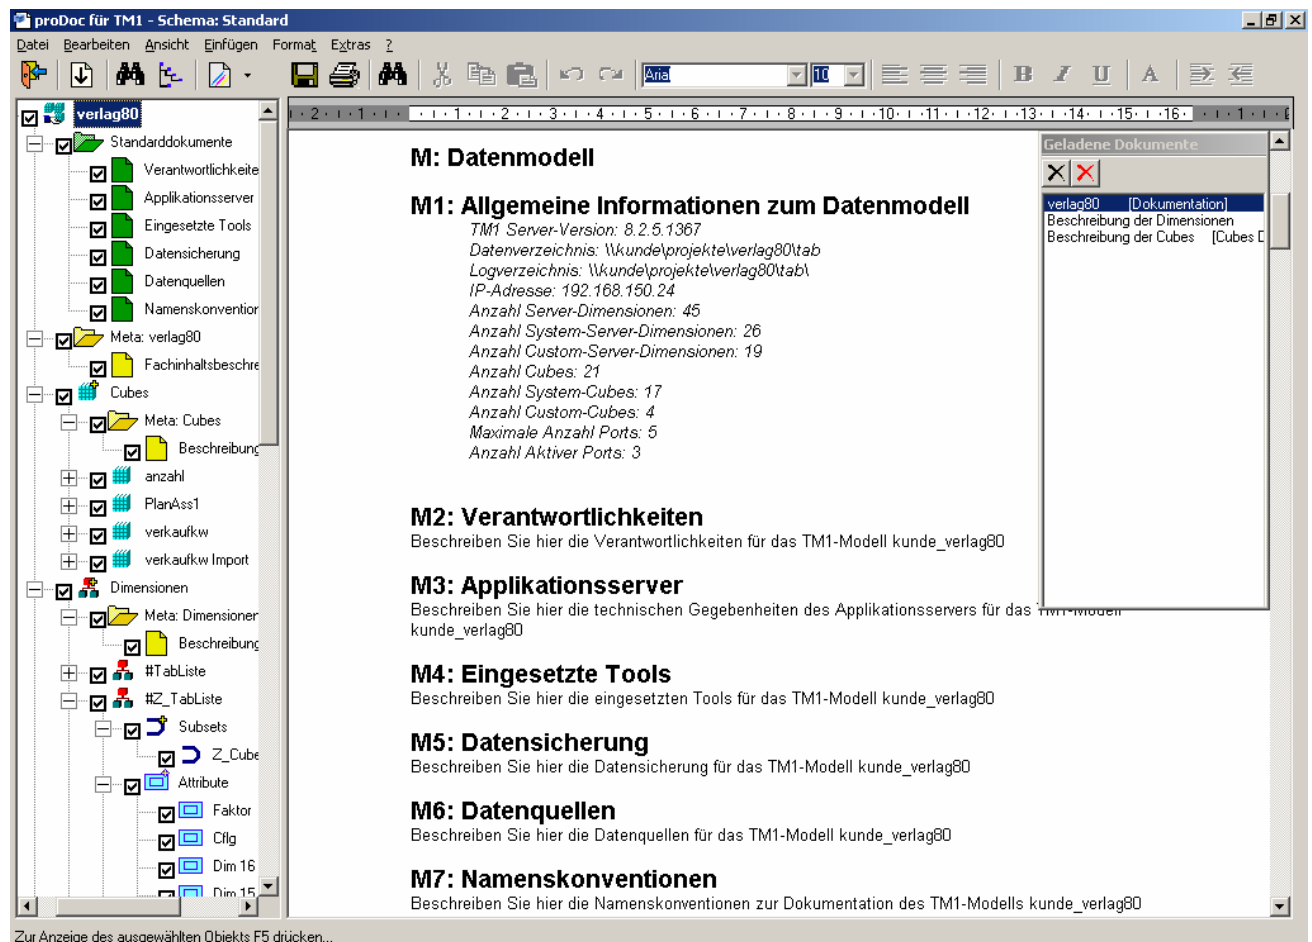

In the last years the business intelligence analytical engine Applix TM1 has been engineered as an efficient and powerful tool to realize powerful planning, analysis and reporting projects.

Corresponding to the increased functionality and performance of TM1, the size of TM1 projects has been growing in terms of manpower and complexity. Therefore professional documentation is essential.

Existing documentations are often

- not integrated with the application
- a composition of different documents which are updated independently from each other
- not being updated frequently by users / developers

proDoc for TM1: "A documentation all in one"

The essential advantages - and added value - of proDoc for TM1

- proDoc generates a documentation-frame, which reflects the actual status of your TM1 data model. This frame contains rules, processes and general statistical information about all objects of the TM1 data model
- this frame can be extended by a description of the TM1-object properties.
- add your own properties
- Use integrated standard documenttypes for a structured description of the TM1 data-model.
- Create your personal documents within the TM1 data-structure and add meta-data about cubes, dimensions and processes.
- proDoc generates an complete documentation, which is indexed by the metad data.of TM1-objects
- individual documents are always integrated within the given proDoc structure. There is no need to generate external documentations.
- Use the possibility to create individual documentation by selecting those topics which are dedicated to different user groups.

TM1-Versions

Version 7.1.4. Build 414 and higher

Operating System

Windows 2000, Win NT, Windows XP

Licence-agreement
